

**Amy Slattery** is an Associate at BNIM and is a recipient of the 2011 AIA National Young Architects Award. As a Project Architect for the Kauffman Center for the Performing Arts in Kansas City, Missouri, Amy is an integral team leader who adeptly organizes construction documents, coordinates the consultant team and facilitates contractor communication during construction administration. During design development, she worked full time in the Boston office of the project designer, Moshe Safdie & Associates. Through that relationship, she gained the full trust of the project designers and was a part-time site representative for the construction of the two performance halls, serving as the eyes and ears for the design team in Boston. Amy is now serving as Lead Project Architect of the new state-of-the-art WIN-GEM building for the School of Engineering at UCLA, a collaborative project with Los Angeles architecture firm Moore Ruble Yudell.

Through her involvement with the AIA at local, regional and national levels, Amy has emerged as a national voice advocating for diversity and emerging professionals. Within her industry, she is perhaps best known for her role in creating Women in Design Kansas City, a flourishing organization that advances the work women are doing in the profession and improves the way our lives intersect that work.
